- Crystal Reports Integration
- Xcelsius Integration

CAT STEELMANAGER

Document Management—eDocs

Imagine this: there's a customer's truck in your yard, his steel has been loaded, you've prepared the delivery ticket, and now the mill-cert is nowhere to be found! Sounds familiar? SM eDoc module was designed to ensure that situations like that are things of the past. All critical documents are stored within our system and are always available.

Key Features

- Associate documents with SM entities such as casts, sales, customers... Wherever the entity can be viewed on screen, its documents may also be viewed
- Store any form of document: if Windows will open it with a double-click, you can store it in SM
- Source documents in a variety of ways:
 - ◆ All stationery produced by SM can, configurably, be automatically stored
 - ◆ scanner; if you scan barcoded stationery originated from SM the system can automatically recognise and link it appropriately. Thus a scanned advice-note, signed by the customer, can be recognised as a proof of delivery, for example, and automatically stored against the sale
 - ◆ from email attachments. Thus PDF mill-certs, customers' drawings, etc can all be entered – with no need to print them first
- View, print, email or fax documents or groups of documents directly from SM
- Save time: no more lost documents, no more photocopying mill-certs, etc
- Save costs by reducing paperwork and postage

Microsoft
Small Business
Specialist

We are certified as a Microsoft Small Business specialist and have proven experience providing Microsoft products, services and solutions for your small business.

If you have any requirements for OpenEdge ABL development we have the experience. Advanced GUI for .NET, AppServer and other OpenEdge technology expertise available.
