- Crystal Reports Integration
- Xcelsius Integration

## *CAT* STEEL MANAGER

### Purchase Order Processing

Imagine this: there's a customer's truck in your yard, his steel has been loaded, you've prepared the delivery ticket, and now the mill-cert is nowhere to be found! Sounds familiar? SM eDoc module was designed to ensure that situations like that are things of the past. All critical documents are stored within our system and are always available.

### Key Features

- Raise purchase-orders for both policy-stock and also merchanting (back-to-back) requirements; analyse both separately
- Use SM's powerful purchase-planning facilities to assist in making those policy-stock buying decisions
- If a purchase expected-date slips, alert users associated with sales waiting for the material; within the sales module sales with such material-availability issues are traffic-light colour highlighted
- Ask SM to remind you when it's time to expedite this or that particular purchase
- Optionally ask SM to check either or both of chemistry and mechanical-properties of the material received
- Enter suppliers' invoices and check them against receipts. Post purchase-invoices into a range of popular accounts systems
- Allocate sales-orders against outstanding purchases. When material is received, prompt user to reallocate, or use SM's alert system to inform sales staff that material has been received. If the purchase's expected-date slips, highlight affected sales
- Send a purchase enquiry to several suppliers; convert the "best" to a purchase order.

Microsoft  
Small Business  
Specialist

We are certified as a Microsoft Small Business specialist and have proven experience providing Microsoft products, services and solutions for your small business.

If you have any requirements for OpenEdge ABL development we have the experience. Advanced GUI for .NET, AppServer and other OpenEdge technology expertise available.
