- Microsoft® Office 365 Online Services

PROJECT MANAGEMENT
- Full Project Management and Implementation Services.

SAP CRYSTAL REPORTS
- Crystal Reports Integration
- Xcelsius Integration

CAT STEELMANAGER

Sales Order Processing

Whether you're selling from stock for next-day delivery, or engineering components to a customer's specification with a lead-time of months, you'll find SM's Sales Order Processing module quick, intuitive, flexible and powerful. Any or all of the functions can be configured in if you would find them useful, or configured out if they would get in the way.

Key Features

- Turn enquiries or estimates into sales with a mouse-click
- Links into popular accounts systems to enforce credit-control rules
- Control sales-order progressing by enforcing rules such as "Contract Review must occur before production stationery can be printed"
- Quick links into the stock module. Allocate physical stock or incoming material from a purchase order; optionally have chemistry- and/or mechanical-properties checked automatically at this point
- Allow SM's alerts system to keep key users informed of sales slippage if purchase expected-dates slip, etc
- Add a process route to a sale, listing the manufacturing stages through which the material from stock must pass in order to achieve the customer's requirements
- Schedule the route so that orders falling behind schedule can then be highlighted for corrective action to be taken at an early stage
- Control the load on your internal production facilities
- Issue purchase-orders on subcontractors; see where your material is at subcontractors; check their invoices against returns from subcontractors
- Monitor profitability with powerful job-costing facilities.
